

Government Actuary's Department licences Longevity software

27 June 2024

London, England and Edinburgh, Scotland. 27 June, 2024.

Longevity is pleased to announce that the Government Actuary's Department (GAD) has licensed the Longevity survival-modelling software.

John Dignan, Actuary at the GAD said "We will use Longevity to analyse pensioner mortality for our clients. A particular interest lies in using postcodes to refine understanding of socio-economic differentials."

Stephen Richards, Managing Director of Longevity said "We are delighted that our industry-leading technology can support the GAD in gaining deep understanding of longevity risk."

About the Government Actuary's Department

GAD provide actuarial solutions for the government and wider public sector, with expertise in a wide range of specialisms. This includes risk analysis, modelling, quality assurance and advice about a large and complex range of client projects. We use data insights to identify trends and share insights. GAD's work ranges from assessing the pension arrangements of over 16 million current and former public service workers, reporting on the National Insurance Fund and State Pension age, estimating the size of future clinical negligence claims and advising on investment and funding strategies to control risks.

About Longevity

Longevity provides specialist software for actuaries working with longevity risk. Clients include insurers, reinsurers and consultancies, with users spread across the UK, USA, Canada, Switzerland and India.

Longevity® is a registered trademark in the UK, US and EU. Please see <https://www.longevity.co.uk/legal> for additional trademark information and notices.
